

# RemoteView Security Plus+

Your ATMs run a Windows computer inside them. Just as your personal computer needs security software, so do your ATMs, especially since they capture your customers' bank account and financial information. Because Microsoft has discontinued support for Windows XP, which a large number of ATMs are still running, the biggest threat to your ATM network is malware attacks targeted to ATMs.

With the RemoteView ATM Security Suite, we can prevent attacks. Security+ is a Trusted Applications, Anti-Virus, and Anti-Malware application. With the Security+ module in place, your ATMs are completely locked down against malicious attacks.

## Rest Easy Knowing your ATMs are Protected

- » We use the best anti-virus, anti-malware, and trusted applications software available
- » Your institution is in compliance with the Payment Card Industry (PCI) Data Security Standard, a set of requirements designed to ensure that ALL companies that process, store or transmit credit card information maintain a secure environment
- » Your ATMs are protected by a firewall
- » We manage your security policies and include full quarterly reports for your audit trail

## SOC 2 Type2

We built the RemoteView product line with industry security standards in mind. Our SOC 2 Type 2 audit confirms that we follow a set of pre-defined benchmarks for security, availability, and confidentiality. You can be assured that your information is protected and available. A report is available upon request.

## Frequently Asked Questions

Q: What Anti-Virus and Anti-Malware definitions do you use?

We use the AppGard Anti-Virus definitions and Malware Bytes.

Q: How secure are the connections you use for access?

Security is our #1 focus. Our SOC 2 Type 2 audit confirms that we follow a set of pre-defined benchmarks for security, availability, and confidentiality. We use AES 256 bit encrypted VPN connections, which are considered among the most secure available: AES (Advanced Encryption Standard) is used by the U.S. government to protect classified information and is implemented in software and hardware throughout the world to encrypt sensitive data. In addition, we test for vulnerability every month.
